

EDUARD PICHARDO ROCHET

Full Stack Software Engineer · 4+ Years of Experience

eduarro2001@gmail.com · +1 829-673-6905 · Dominican Republic · [LinkedIn](#) · [Portfolio](#)

PROFESSIONAL SUMMARY

Results-driven Full Stack Software Engineer with 4+ years of experience designing, building, and deploying scalable, high-availability applications. Proficient in the JavaScript/TypeScript ecosystem (NestJS, Node.js, Angular, React) with strong expertise in Java/Spring Boot, C#/.NET Core, and cross-platform mobile development with React Native and Kotlin. Proven track record integrating AWS cloud services, AI-powered automation (Gemini, Claude), and AI-assisted development tools to accelerate delivery. Known for translating complex business requirements into robust technical architectures across backend, frontend, and mobile layers.

WORK EXPERIENCE

Software Engineer | [Newtech S.R.L.](#) · Dominican Republic · Remote *Sep 2021 – Present*

► **Financial Services Platform (Confidential Client)** *Mar 2024 – Present*

- Architected and developed high-throughput backend services using NestJS, TypeScript, and PostgreSQL, maintaining 99.9% uptime while processing large volumes of financial transactions.
- Integrated AWS S3 for secure, efficient storage of sensitive financial documents, reducing document retrieval latency by 30%.
- Led cloud deployments on AWS EC2, establishing stable CI/CD pipelines with automated rollback strategies.
- Built dynamic, responsive frontend interfaces with React.js and Angular 13+, improving user engagement through enhanced data visualization and streamlined UX.
- Accelerated feature delivery by 35% through systematic use of AI coding tools (Claude Code, GitHub Copilot) across the team's development workflow.

Stack: NestJS · Angular · React.js · PostgreSQL · AWS S3/EC2 · TypeScript · Node.js · Vite · Git

► **Telecom Operations Solutions (Client: Verizon)** *Sep 2021 – Mar 2024*

- Designed and maintained full stack features using Java 8/17, Spring Boot, React.js, and TypeScript for mission-critical telecom operations systems.
- Optimized complex SQL Server queries, reducing application response times by 15% and directly improving end-user experience.
- Grew unit test coverage from 45% to 78% using Jest, resulting in a 20% decrease in production incidents.
- Conducted technical code reviews and drove clean code standards adoption, reducing team technical debt over successive sprints.

Stack: Java 8/17 · Spring Boot · React.js · TypeScript · SQL Server · Jest · Maven · Git · Jira

Backend Engineer (Contract) | [Naxmek Business S.R.L.](#) · Dominican Republic · Remote *May 2023 – Sep 2023*

- Developed and maintained RESTful APIs in C# and .NET Core for enterprise management platforms, with data access via Entity Framework Core and SQL Server.
- Built a comprehensive xUnit test suite achieving 80% coverage, ensuring system stability through frequent requirement changes.

Stack: C# · .NET Core · Entity Framework Core · SQL Server · xUnit · Git · GitLab

Software Developer (Internship) | [XpertCode](#) · Dominican Republic · Remote *Feb 2021 – Sep 2021*

- Built Node.js/NestJS API endpoints for automated validation of government tax identifiers, processing over 10,000 records daily.
- Contributed to Vue.js/Nuxt.js frontend by developing reusable components, cutting new screen development time by 25%.

Stack: Node.js · NestJS · Vue.js · Nuxt.js · PostgreSQL · TypeScript · Jest · Git

PERSONAL PROJECTS

► **FintechRD — Personal Finance App (Full Stack)***2025 – 2026*

- Built a complete personal finance management platform for the Dominican Republic market, with a NestJS + PostgreSQL backend and a React Native (Expo) mobile app.
- Implemented automatic transaction syncing via Gmail API + OAuth2 integration, with a hybrid Regex + Gemini AI parser to extract structured data from bank notification emails (BHD, Banco Popular).
- Designed an AI-powered categorization engine using Google Gemini 1.5 Flash with a 70% confidence threshold, enabling fully automatic batch transaction categorization.
- Architected JWT + Google OAuth authentication, biometric unlock (expo-local-authentication), secure token storage, and full multi-tenant data isolation per user.
- Delivered a Swagger/OpenAPI-documented REST API with multi-currency support (DOP/USD/EUR), soft deletes, and a reproducible Docker Compose environment.

Stack: NestJS · PostgreSQL · TypeORM · React Native · Expo · TypeScript · Gemini AI · Gmail API · JWT · Docker

► **MangApp — Cross-Platform Manga Reader***2025*

- Built a cross-platform mobile app (iOS/Android) with React Native and Expo for browsing and reading manga, consuming the public MangaDex API.
- Implemented offline chapter downloads, incognito mode via global React context, smart reading history cache (AsyncStorage + 1-hour TTL), and toast notifications.
- Optimized rendering performance for large content lists using FlatList, React.memo, useCallback, and useRef to eliminate unnecessary re-renders.
- Configured production builds with EAS (Expo Application Services) for App Store and Google Play distribution.

Stack: React Native · Expo · TypeScript · NativeWind · React Navigation · AsyncStorage · EAS

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Java, C#, Kotlin, SQL, HTML, CSS/SCSS Backend: NestJS, Node.js, Spring Boot, .NET Core Frontend: Angular 13+, React.js, Vue.js, Nuxt.js Mobile: React Native (Expo), Kotlin (Android)	Databases: PostgreSQL, SQL Server, MongoDB, MySQL, OracleDB Cloud & DevOps: AWS S3, AWS EC2, Docker, Docker Compose Tools: Git, GitHub, GitLab, Jira, Maven, npm, pnpm AI & Dev Tools: Claude Code, GitHub Copilot, Codex, OpenCode, Gemini AI
